

INTRODUCTION TO ADDITIONAL COSTS

Catharine Fitzsimmons, Air Quality Bureau

Current and Projected Expenses and Revenues

Future “non-status quo” expenses

SO₂ Data Requirements Rule

- May 13, 2014, EPA Proposed the Data Requirements Rule for the 1-Hour Sulfur Dioxide Primary NAAQS.
- EPA expects to finalize rulemaking in early 2015.
- EPA Goal: Determine SO₂ attainment status where there are not currently monitors.
 - Dispersion Modeling
 - Monitoring
- Note – facilities may alternatively be impacted by new designations based on existing monitoring, or federal court settlements.

SO₂ Data Requirements Rule

Timelines:

SO₂ Data Requirements Rule

- EPA's proposed thresholds are expressed in terms of annual tons of SO₂.
- Two-pronged approach is proposed
 - Lower threshold in more populated areas
 - Higher threshold in less populated areas
- 3 Options: EPA preferred option
 - Inside CBSA's >1,000 tpy
 - Outside CBSA's >2,000 tpy
- Based on 2013 Inventory: 12 Facilities in Iowa

SO₂ Data Requirements Rule

FACILITY NAME	SULFUR DIOXIDE (TONS)
WALTER SCOTT JR ENERGY CTR	13,593
IPL - OTTUMWA GENERATING STATION	13,126
MIDAMERICAN ENERGY CO - GEORGE NEAL SOUTH	10,050
MIDAMERICAN ENERGY CO - GEORGE NEAL NORTH	8,421
MIDAMERICAN ENERGY CO - LOUISA STATION	8,285
CENTRAL IOWA POWER COOP - FAIR STATION	4,431
IPL - BURLINGTON GENERATING STATION	3,941
IPL - LANSING GENERATING STATION	3,820
MIDAMERICAN ENERGY CO - RIVERSIDE STATION	3,226
ADM CORN PROCESSING - CEDAR RAPIDS	3,163
IPL - M.L. KAPP GENERATING STATION	2,983
IPL - PRAIRIE CREEK GENERATING STATION	2,917

SO₂ Data Requirements Rule

Initial cost per monitoring site (one time):

Expense	Cost (per site)
Calibrator (Thermo 146i)	\$10,000
Zero Air Generator (Teledyne 701H)	\$6,500
SO2 Analyzer (Thermo 43i-TLE)	\$12,000
Datalogger (Agilaire/DRDAS/ESC)	\$8,500
Cellular Modem (Raven)	\$700
Meteorological Sensors (WD/WS/T/RH)	\$2,600
Trailer (Lone Star/Shelter One)	\$40,000
Modeling the Point of Highest Impact for Monitor Placement	\$7,900
Equipment purchase, contracting, site selection, etc.	\$8,600
Total	\$96,800

*Note that the estimates above do not include costs associated with power installation. Establishing electrical service requires installation of a power pole & meter. If there are no electrical lines nearby the cost for trenching power is approximately \$4 per foot. If the length of the power line used for trenching exceeds 250 feet, then a transformer must be installed at additional cost. An electrician must be retained to make final connections to the trailer.

SO₂ Data Requirements Rule

Expenses per monitoring site (ongoing):

- Based on current network costs, we estimate the annual operation and maintenance costs for a SO₂ site as approximately **\$48,000**. These operation and maintenance costs include:
 - Salaries for field operations, data management, supervision and quality assurance.
 - Transportation and travel expenses.
 - Calibration gases, equipment replacement and site communications.
 - Electrical service.

SO₂ Data Requirements Rule

Total Cost to Establish the Attainment Status for a Facility with One Monitor

- \$96,800 (est. site) + 3 x \$48,000 (O&M cost for three years of monitoring) = \$240,800

Total Cost to Determine Attainment Via the Monitoring Pathway

- 12 (sites) x \$240,800 (per site) = \$2,889,600

SO₂ Data Requirements Rule

Dispersion Modeling Costs:

Staff	Activity	Cost (per facility)
Permit Engineer	Emissions review	\$2,900
Modeler	Protocol	\$2,000
	Input files	\$600
	Post process	\$800
	Summaries	\$800
	Admin time*	\$800
Total		\$7,900

Total Cost to Determine Attainment Via the Dispersion Pathway

- 12 (sites) x \$7,900 (per site) = \$94,800

SO₂ Data Requirements Rule

Other Costs:

Engineer and dispersion modeling staff time to establish new permit limits for sources that request new emission limits to stay out of the review entirely -
\$???

Agency costs for nonattainment area planning

Costs for nonattainment area planning include:

- Determination of nonattainment boundaries:
 - Emissions characterization (base-case, culpability),
 - Background ambient air technical justification,
 - Negotiations with EPA,
 - Dispersion Modeling,
 - Public meetings and hearings.
- Development of Attainment plan:
 - Working with facilities to develop emissions reductions and contingency plans,
 - Dispersion Modeling (attainment scenarios),
 - Development of detailed consent agreements,
 - Negotiations with EPA,
 - Public meetings and hearings.
- Monitoring progress, reporting, plan modifications, maintenance.

Agency costs for nonattainment area planning

Estimated cost for the agency for each nonattainment area:

Boundary determination:	\$64,000
Attainment Plan development:	\$356,000
Annual Follow-up until attainment:	\$ 54,000
<u>Maintenance work: 10 yrs</u>	<u>\$ 64,000</u>
Total	\$538,000

Est. based on 6 major sources in county and 2-3 facilities in final nonattainment area.

Revitalizing Communities – Asbestos

- DNR's role: Iowa has adopted the federal Asbestos Standard (NESHAP) requiring inspections and appropriate removal of asbestos (over specified quantities) from all demolition or renovation projects in commercial structures (includes certain multi family dwellings).
- Community revitalization efforts often uncover both old and recently installed materials containing asbestos.

The original 1989 EPA ban on the U.S. manufacture, importation, processing, or distribution in commerce of many asbestos-containing product categories was set aside by the courts and did not remain in effect.

Revitalizing Communities – Asbestos

- Products still banned under the Ban and Phaseout rule –

Corrugated Paper	Rollboard
Commercial Paper	Specialty Paper
Flooring Felt	New Uses of Asbestos
- **Products not banned** - Asbestos-containing product categories no longer subject to the 1989 TSCA ban include:
 - Asbestos-cement corrugated sheet, asbestos-cement flat sheet, asbestos clothing, **pipeline wrap**,
 - **Roofing felt**, vinyl-asbestos floor tile, asbestos-cement shingle, millboard, **asbestos-cement pipe**,
 - Automatic transmission components, clutch facings, friction materials, disc brake pads & drums
 - Brake linings, brake blocks, gaskets, non-roofing coatings, and roof coatings.

Revitalizing Communities – Asbestos

Since 2009 there has been a large increase in the number of asbestos notifications for building demolitions & renovations.

Asbestos Notifications & Inspections

Revitalizing Communities – Asbestos

- Due to declining Title V funds in 2010, DNR reduced the number of asbestos inspectors from two to one, eliminating the position funded by Title V fees.
- The combination of the above factors has led to less oversight of regulated asbestos projects and has reduced DNR's ability to help prevent asbestos exposure.
- Since 2011, DNR Solid Waste has funded the asbestos inspector's personnel costs, due to increasing costs, and stagnant state and federal funds. Funding challenges in the SWAP program make this an unsustainable option for the future.

Revitalizing Communities – Asbestos

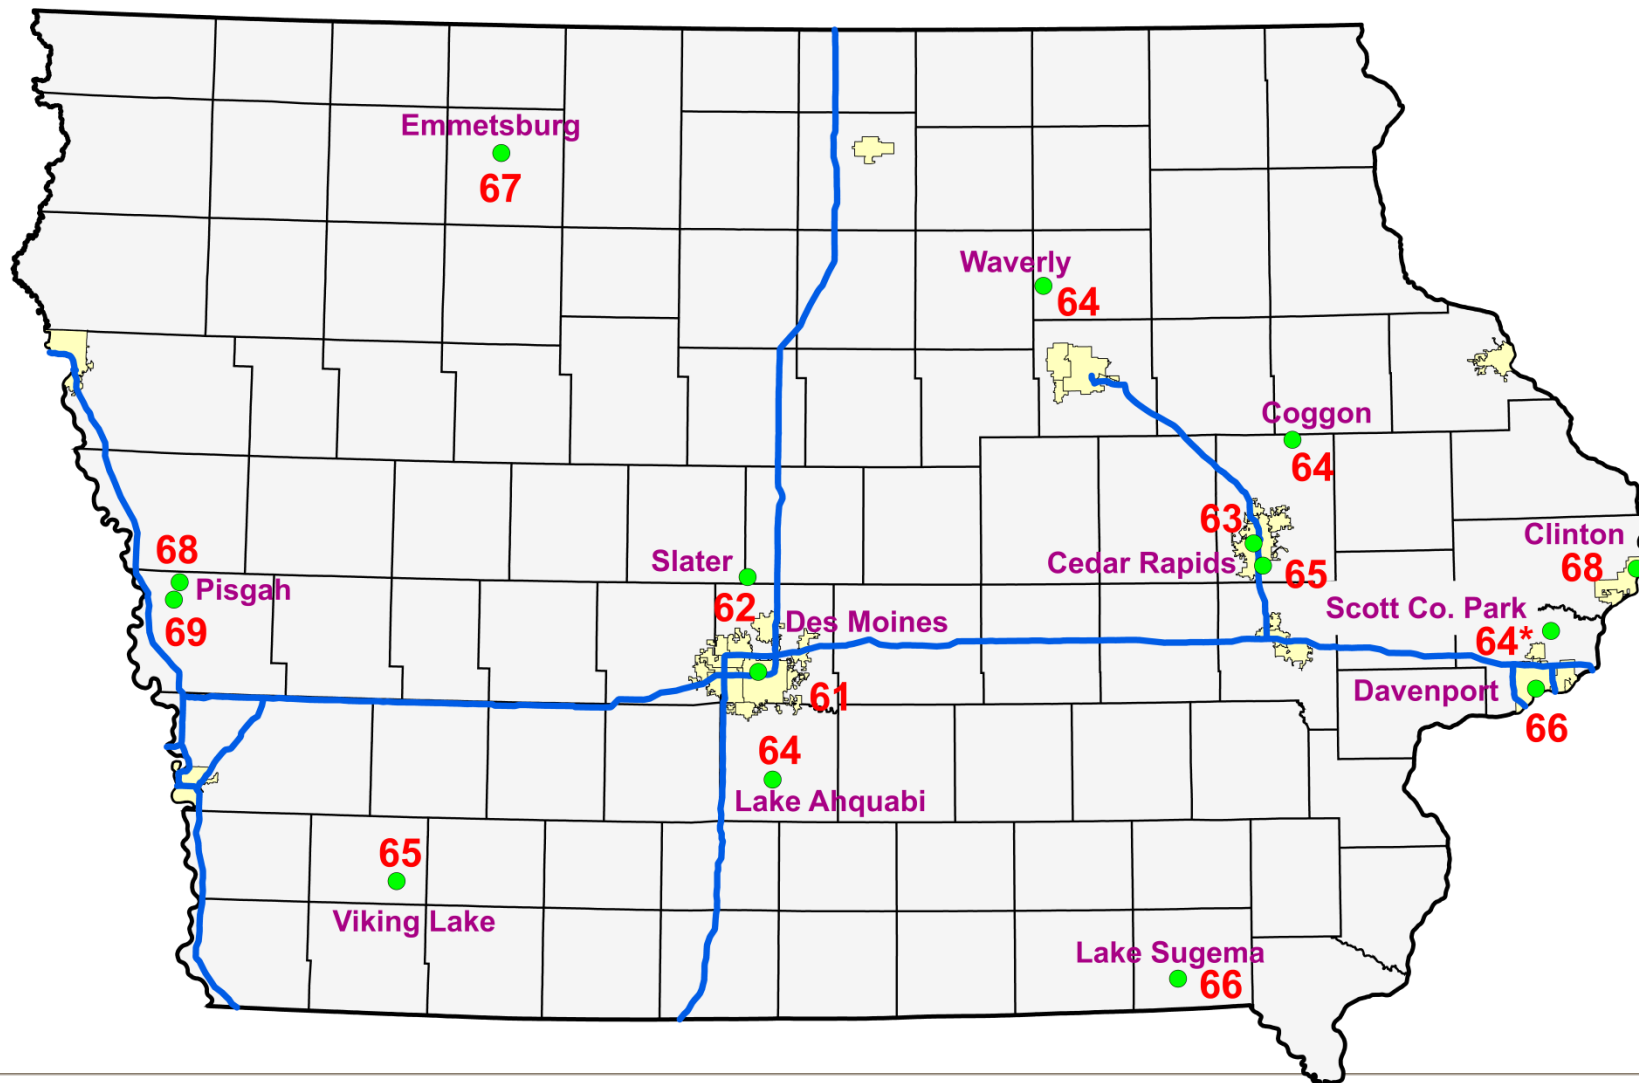

- DNR prioritizes inspections and complaint responses to those projects with the greatest potential for exposure to children and large numbers of individuals.
- To inspect 5% of the average annual notifications of asbestos removal at 4,500 sites*, 225 inspections or 3 times the current number would have to be conducted.
- Including training, a vehicle, computer equipment and support, specialized safety equipment, salary, benefits, agency indirect costs, an asbestos inspector (environmental specialist) costs run at about \$130,000 per year.

* Est. 10% of notifications are updates on existing notifications

Revised Ozone National Ambient Air Quality Standard

- EPA will be proposing a new ozone standard before the end of 2014. New standard expected to be a value between 60 – 70 ppb.
- New Ozone Monitors will eliminate moisture impacts on data: \$12,600 x 47 Monitors = \$592,200.
- By October 2015, the standard will be finalized.
- State recommendations for designations and nonattainment boundaries if required will be due to EPA by October 2016.
- Nonattainment plan elements (marginal area) generally due to EPA by early 2020.

Ozone – 2015 Design values 2011-2013

Ozone 2015

Ozone nonattainment program cost estimate:

New Standard	Number of Nonattainment Areas
≥ 69	0
68	1
67	2
66	3
65	4 or 5
64	6 or 7
≤ 63	8 or 9 or entire state?

Boundary establishment and Attainment Plan:
\$420,000 per area

Construction Permit Backlog

Projections of Construction Permit Staffing

- Analysis of past data and projections in the future:
 - Full staffing is anticipated to provide the correct staffing level.
 - Changes to current staffing or inclusion of other necessary services will significantly affect leadtime.*

* Leadtime is the time from permit application receipt by the DNR, until the permit is issued.

Construction Permit Backlog

Critical Services Beyond Permitting

- ~20% of engineer time is spent providing additional services to Business and Industry, the Public and the rest of the Air Quality Bureau:
 - Applicability determinations / assistance,
 - Emissions estimation assistance,
 - Meetings and consultation with economic development prospects,
 - Review and assist local air quality programs,
 - SIP / Nonattainment plan development,
 - Rules review.

Basis for Construction Permit Projections

- Projects Received
 - Based on the monthly averages of the last 3 years,
 - Adjusts future years using 1% annual projected growth.
- Engineer Capacity Adjustments
 - Filling vacant positions (EES and EE),
 - Training/onboarding of new staff (EES and 3 EE),
 - Does not account for additional complex projects (take more staff resources).

Construction Permit Project Backlog Projection

The 3-year monthly average for 2011-2013 was used as the baseline, and 1% growth in # of projects received is projected.

Construction Permit Backlog - Conclusions

In the last quarter of 2016 we expect:

- To have the backlog of projects eliminated,
- To meet or exceed the goals of issuing projects:
 - Standard: within 30 days of receipt
 - Complex: within 90 days of receipt
 - PSD: within 180 days of receipt

But only if:

- We remain fully staffed,
- No other projects pull engineers off of regular permit issuance.*

*see SO2 data requirements rule, Ozone standard, Carbon standards activities

Title V Permit Backlog Projection

- Title V Backlog = applications > 18 months
- Backlog projection is based on:
 - Applications > 18 months + new applications
 - Assumes oldest permits issued first
 - Permit writer capacity adjusted for
 - Training/onboarding new staff
 - High historical staff turnover (5%)

Title V Backlog Projection – Current staffing

Title V Backlog Projection – Plus 1 staffing

Title V Permit Modifications

Total Received by Year

Critical Services Beyond Permitting

With additional staff:

- Title V can meet requirement to issue permits within 18 month of receiving a complete application
- Better meet the needs of the regulated community
 - Issue permit modifications
 - Training / outreach
 - Revise application forms
 - Adjust to upcoming issues/ new federal regulations

Annual Cost of additional environmental specialist:

- \$120,000 includes salary, benefits, DNR indirect charges, training, travel, computer, etc.

INFORMATION TECHNOLOGY SERVICES

CARBON STANDARDS – 111(D)

INFORMATION TECHNOLOGY SERVICES

Emissions Inventory & Support Section

Jason Marcel, Supervisor

August 20, 2014

Presentation Outline

- Information Technology Services:
 - State Permitting & Air Reporting System (SPARS)
 - State & Local Emissions Inventory Systems (SLEIS)
 - Ongoing Support
 - Idea List

“While many factors contribute to being an agile enterprise, an organization's information systems play a major role. Unfortunately, most legacy systems prevent businesses from being more adaptable to change.”

Ulrich, William M.

Legacy Systems Transformation Strategies, 2002

SPARS

Brief History

- State Permitting & Air Reporting System (SPARS)
- Developed 1998-2000
- “Live” in 2000 – stand alone program installed on PC
- SPARS Web – 2006
- SPARS Advisory Committee

Brief History

- What SPARS is used for:
 - Online submittal of air quality permit applications & emissions inventories
 - Online permit tracking
 - Online permits (PDFs)
 - Specialized queries for planning, modeling, information requests, etc.
 - Emissions data for National Emissions Inventory
 - Flows data to other DNR systems

SPARS Functions

Construction Permits	Emissions Inventory	Title V Permits	Other Data Systems
Online Reporting	Online Reporting	Online Reporting	DNR Facility Explorer (“One Stop”)
Features: <ul style="list-style-type: none"> • Copy from previous Application • Store Attachments • Data Download 	Features: <ul style="list-style-type: none"> • Copy from previous Inventory • Save Attachments • Data Download 	Features: <ul style="list-style-type: none"> • Copy from previous Application • Store Attachments • Data Download 	Field Office Database
Custom Data Queries	Custom Data Queries	Custom Data Queries	Stack Test Database
Project Tracking Online: <ul style="list-style-type: none"> • Search Application Status • View Issued Permits (PDF’s) • Public Comment Notice 	National Emissions Inventory (NEI)		Construction Permit Search
			AQWebApps

SPARS Costs

FY	Description	Total Cost
1996	Servers, Oracle Database & Software	\$1,484,076
1997 – 2004	Professional Services (Computer Consultant)	\$1,784,381
2005 – 2006	Professional Services (SPARS Web)	\$260,140

Ongoing Maintenance:

- Oracle - \$14,042/yr
- PowerBuilder/Appeon - \$13,213/yr
- TOAD - \$1,660/yr

Trends – SPARS Submissions & Assistance

SPARS Risks

- Developer Support
- Web Browser Restrictions
- Security Settings
- CROMERR
- Business Changes
- Data Quality/Management

SPARS Survey

**For what types of reporting do you use SPARS?
(check all that apply)**

SPARS Survey

As the DNR looks for ways to improve SPARS, please tell us how important the following features would be to you.

SPARS Survey

Of the three improvements listed above, which is the most important for your reporting needs? (check one)

- ☐ Facility data / emission data upload or import to system
- ☐ Redesigning SPARS data entry screens to match the paper forms
- ☐ Include the use of additional browsers along with or instead of Internet Explorer (i.e. Firefox, Chrome, Safari, Opera, etc.)

SLEIS

SLEIS State & Local Emissions Inventory System

- “Off the Shelf” system created under EPA Challenge Grant
- Developed by 6 States/local air quality programs and Windsor Solutions
- Implementation in Iowa funded by EPA Exchange Network Grant
- Partial replacement of SPARS

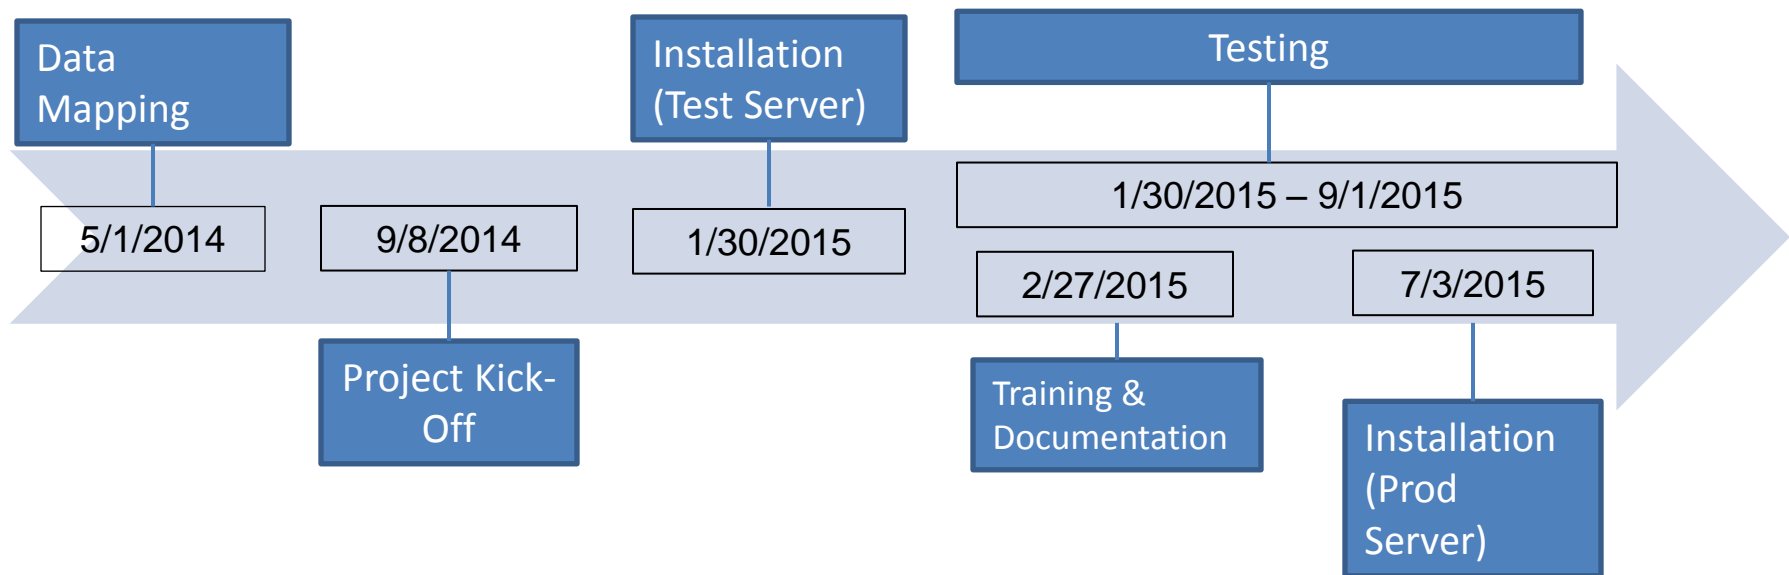

SPARS Functions

Construction Permits	Emissions Inventory	Title V Permits	Other Data Systems
Online Reporting	Online Reporting	Online Reporting	DNR Facility Explorer (“One Stop”)

			AQWebApps

Five “F” Analysis

Factor	Question to Ask	SLEIS Comments
FIT	How well does the application match the business and technology needs for the organization?	SLEIS uses DNR standard .NET and SQL Server technologies, and integrates directly into the Exchange Network for communicating with EPA. From a business standpoint, it matches reasonably well with emission inventory requirements but needs major additions to support permit application needs. (See SLEIS Customization Requirements section for details)
FEATURES	What features does the application provide, and will they be useful for the organization?	SLEIS features that were identified as useful by stakeholders include: ability to import emissions, the built in node client which enables direct EIS submissions to EPA, ability to make some system modifications by configurations (rather than programming), and built in CROMERR (electronic record submission) functions.
FUTURE	Is the application positioned to support the organization’s requirements into the future?	SLEIS is based upon the latest emissions data reporting format. The SLEIS vendor has a good reputation for maintaining and supporting their products, and a growing base of user states should help drive future sustainability.
FLEXIBILITY	How easy is it to modify and adapt the application?	SLEIS is designed to allow some types of modifications to be done easily without programming. However, use of a system shared with other states may require additional time to define changes and enhancements, and may require design compromises that could limit flexibility.
FINANCIALS	What are the immediate and long term costs for the application?	SLEIS would involve fairly substantial short term costs for customization and conversion as described in <u>Attachment 8</u> . In the long term, the expectation would be that costs would be lower for several reasons: system cost sharing with other states, elimination of Oracle/PowerBuilder/Appeon licensing, reduction of EIS submission manual work, and shared infrastructure support.

SLEIS Timeline

What about updating SPARS for
online permit applications?

SPARS Functions

Construction Permits	Emissions Inventory	Title V Permits	Other Data Systems

Timeline

Proposed Implementation Timeline

Scope of Work

Scope of Work

Size of EPA's June 2 Proposal:

- Proposal (645 pages)
- Regulatory Impact Analysis (376 pages)
- 7 Technical Support Documents (492 pages)
 - 10 data files
- 2 Memos (125 pages)
- 6 Fact Sheets
- Modeling Files

Scope of Work

Since the Rule was Proposed:

- 14 webinars/briefings/Q&A calls
- 8 calls with Region 7 EPA & States
- 12 meetings/calls with stakeholders
- 3 Multi-State group meetings

12 Components Required in the State Plan

- ▶ Identification of affected entities
- ▶ Description of plan approach and geographic scope
- ▶ Identification of state emission performance level
- ▶ Demonstration that plan is projected to achieve emission performance level
- ▶ Identification of milestones
- ▶ Identification of corrective measures
- ▶ Identification of emission standards and any other measures
- ▶ Demonstration that each emission standard is quantifiable, non-duplicative, permanent, verifiable, and enforceable
- ▶ Identification of monitoring, reporting, and recordkeeping requirements
- ▶ Description of state reporting
- ▶ Certification of hearing on state plan
- ▶ Supporting material

Reports Due after the State Plan is in Place

- Annual state reporting to EPA starting July 1, 2021:
 - The level of emissions performance achieved by all affected entities both during the reporting period and prior reporting periods.
 - A list of all affected entities and their compliance status; identification of whether they are on schedule to meet performance goals
 - For each rolling 2 year period from 2020 – 2029, a comparison of the average CO2 emission performance of affected entities versus their projected performance in the state plan.
 - If performance is >10% in excess of the projected performance, the deviation must be explained and corrective actions specified
- The 2029 annual report must include the calculation of average emissions over the 2020 – 2029 interim performance period to determine compliance with the interim state goal.
- Starting with the 2032 annual report, calculate a 3-calendar year rolling average used to determine compliance with the final state goal.

Estimated Cost to DNR – Similar to a Nonattainment Plan Development.

– or more if regional?
